Major American Cities (pop>400k)

Ranked by Neighborhood Diversity

Average Census Tract Herfindahl-Hirschman Index

A few weeks ago, we published a chart ranking the largest cities in America (<http://priceonomics.com/the-most-and-least-diverse-cities-in-america/>) by the diversity of its top-line demographics. We simplified these demographics down to five major racial/ethnic groups, and the closer they were to being in a 1:1:1:1:1 ratio with each other, the more diverse the city was.

But, there was a problem with this.

Theoretically, a city could have a “perfect” diversity score and still not look particularly diverse to a resident, if the racial/ethnic groups are sequestered in homogenous neighborhoods. The problem was that our ranking wouldn’t show indicate if a city was both statistically diverse *and* geographically segregated.

Other people were bothered by this simplification, too, including Chris Dickersin-Prokopp at Greater Greater Washington (<http://greatergreaterwashington.org/post/25252/a-city-can-be-diverse-but-its-neighborhoods-may-still-not-be-and-dc-scores-poorly-on-both-measures/>). He used the same equations we used to calculate the most and least diverse cities in America (<http://priceonomics.com/the-most-and-least-diverse-cities-in-america/>) - the Herfindahl-Hirschman Index -- to calculate a diversity index for *each census tract* in a city. He then found each city’s average census tract diversity index, and ranked the major cities in America by this number. We’ve visualized his results in the bar chart above.

Some cities stayed at about the same rank in this chart as they sat in our ranking of overall city diversity. That’s because, in these cities, diversity and integration go hand in hand. Detroit is an extremely undiverse city, and its minority populations are relatively segregated. Oakland is an extremely diverse city, and its minority populations are relatively integrated.

Major American Cities (pop>400k) Ranked by Diversity

Priceonomics; data via American Community Survey 2013

But there are other cities where this was not the case, which traveled more between rankings. Chicago, for example, is extremely diverse, at about 30% Black, 30% White, and 30% Hispanic. But it's neighborhood diversity index places it towards the bottom of the chart, just ahead of Louisville, Kentucky, which is almost 68% White.

To highlight these cities -- that were either more segregated or more integrated than their overall demographics would imply -- Dickersin-Prokopp plotted average neighborhood diversity index against overall city diversity index. The cities that are far above the trendline have much more homogenous neighborhoods than predicted by the overall city demographics -- and are thus more segregated. The cities far below the trendline have much more heterogeneous neighborhoods than predicted by the overall city demographics -- and are thus more integrated.

Some of America's Most Diverse Cities Are Also its Most Segregated

Priceonomics; data via Chris Dickersin-Prokopp

Even New York City is above the line -- the third most demographically diverse city of its size in America falls to 19th on a neighborhood level. California still dominates the bottom left chunk of this plot, with diverse *and* relatively integrated cities. But cities like Portland, Colorado, and Virginia Beach also stand out as not-very-diverse, but well-integrated.

So, the west coast is doing it right, and the east coast is still battling the ghost of an america gone by

Mcinerall → joel · a year ago

Yeah, cause when I think of getting it right, Oakland usually comes to mind.

This is an awesome update and certainly more accurately represents how a city "feels". I do wonder what direction each city is headed in - which have improved and why? Is it more diverse in older parts of the city (infill) or in greenfill sprawl? And how are we doing w.r.t. income diversity? Always more questions...

This site has a neat model for building intuition about how bias (even expired biases) shape segregation:

<http://ncase.me/polygons/>

The bottom line is: being unbiased will not undo past biases, desegregation takes intentional work

Not necessarily

[Chatter Snavely](#) · a year ago

To get down to the personal level, the "most integrated" city is the one with the highest proportion of mixed-race individuals.

"Even New York City is above the line -- the third most demographically diverse city of its size in America falls to 19th on a neighborhood level."

Presumably this is some sort of regression line, yes? Therefore, being "above the line" just means that NYC's neighborhoods are somewhat less diverse than we would predict for a city of that level of overall diversity. 19th is still somewhat more neighborhood-diverse than the median.

[EqualOpportunityCynic](#) → [EqualOpportunityCynic](#) · a year ago

Likewise I'm not sure that I'd call Portland (31st of 45) exactly well-integrated in its neighborhoods, although I get what you're saying. You mean that given its overall homogeneity, its neighborhoods are well integrated. Still sounds pretty homogenous though.

And I presume you left off part of the name of Colorado Springs.

What are the two cities at the far right - their labels are cut off. I suspect one is Oakland...

[jmars0101](#) → [Matt](#) · a year ago

No, Oakland is down at the bottom left.

1 ^ | v · Reply · Share ›

[Matthew Johnson](#) → [Matt](#) · a year ago

Probably El Paso and Detroit.
